

Transcript of CCI Student Video at http://www.ciec.org.uk/cci_student.htm

Hi there Mrs Andrews! By the time you see this I will be on holiday, having just finished my A-levels in chemistry, physics and maths – nice easy subjects there – and I'm hoping to go to UCL in London to do chemistry, if I get the grades, which I'm hoping I will.

I do remember going to Solvay in year 6 as part of the Children Challenging Industry Scheme, and I really enjoyed it. It sparked an interest and passion for science, that up until that point I didn't really have – I sort of understood science and found it amicable, but I didn't really enjoy it that much. But now I can't get enough of it, really!

So thank you for that, and I just hope that Children Challenging Industry continues on for many more years so that lots more young people can gain an interest and enjoyment out of science.

So thank you very much, and I'd like to wish Children Challenging Industry "Happy Birthday" – it's ten years I believe – so there you go!

Goodbye.
